Spinorial notation in a nutshell

Translation spinors and world tensors $a \to AA'$. Given T_{ab} the spinorial counterpart is given by

$$T_{AA'BB'} = T_{ab}\sigma^a{}_{AA'}\sigma^b{}_{BB'}$$

where $\sigma^a{}_{AA'}$ are the Infeld-van der Waerden symbols (Pauli matrices & Identity)

$$(\alpha_0, \alpha_1, \alpha_2, \alpha_3) \to \frac{1}{\sqrt{2}} \begin{bmatrix} \alpha_0 + \alpha_3 & \alpha_1 - i\alpha_2 \\ \alpha_1 + i\alpha_2 & \alpha_0 - \alpha_3 \end{bmatrix}$$

(frame-) metric: $g_{AA'BB'} = \epsilon_{AB}\epsilon_{A'B'}$

Raise and lower indices: $\xi_B = \xi^A \epsilon_{AB}$

Curvature spinors:
Riemann $\to$ Weyl, tracefree Ricci, Ricci scalar.

Ψ_{ABCD}, $\Phi_{ABA'B'}$, Λ

Spinorial notation in a nutshell

Translation spinors and world tensors $a \to AA'$. Given T_{ab} the spinorial counterpart is given by

$$T_{AA'BB'} = T_{ab}\sigma^a{}_{AA'}\sigma^b{}_{BB'}$$

where $\sigma^a{}_{AA'}$ are the Infeld-van der Waerden symbols (Pauli matrices & Identity)

$$(\alpha_0, \alpha_1, \alpha_2, \alpha_3) \to \frac{1}{\sqrt{2}} \begin{bmatrix} \alpha_0 + \alpha_3 & \alpha_1 - i\alpha_2 \\ \alpha_1 + i\alpha_2 & \alpha_0 - \alpha_3 \end{bmatrix}$$

(frame-) metric: $\quad g_{AA'BB'} = \epsilon_{AB}\epsilon_{A'B'}$

Raise and lower indices: $\quad \xi_B = \xi^A \epsilon_{AB}$

Curvature spinors:

Riemann $\to$ Weyl, tracefree Ricci, Ricci scalar.

$$\Psi_{ABCD}, \qquad \Phi_{ABA'B'}, \qquad \Lambda$$

Killing spinors: Hidden symmetries

Some Killing objects

- Killing vectors

$$\tilde{\nabla}_{(a}\tilde{\xi}_{b)} = 0.$$

- Killing tensors

$$\tilde{K}_{ab} = \tilde{K}_{(ab)}, \quad \tilde{\nabla}_{(a}\tilde{K}_{bc)} = 0,$$

- Killing-Yano tensors

$$\tilde{Y}_{ab} = \tilde{Y}_{[ab]}, \quad \tilde{\nabla}_{(a}\tilde{Y}_{b)c} = 0,$$

$$\tilde{K}_{ab} = \tilde{Y}_a{}^c \tilde{Y}_{cb}.$$

- Killing spinors

$$\tilde{\kappa}_{AB} = \tilde{\kappa}_{(AB)}, \quad \tilde{\nabla}_{A'(A}\tilde{\kappa}_{BC)} = 0$$

$$\tilde{Y}_{AA'BB'} = \mathrm{i}(\tilde{\kappa}_{AB}\tilde{\epsilon}_{A'B'} - \bar{\tilde{\kappa}}_{A'B'}\tilde{\epsilon}_{AB})$$

Killing spinors are more primitive objects!

An example: Kerr spacetime

$$\tilde{\xi}^a = (\partial_t)^a, \ \tilde{\eta}^a = (\partial_\varphi)^a,$$

$$\exists \tilde{K}_{ab}, \qquad \tilde{u}^a \tilde{\nabla}_a \tilde{u}^b = 0.$$

$$\mu = \tilde{u}^a \tilde{u}_a, \quad e = \tilde{\xi}^a \tilde{u}_a,$$

$$\ell = \tilde{\eta}^a \tilde{u}_a, \quad C = \tilde{K}_{ab}\tilde{u}^a \tilde{u}^b$$

Observations

- Geodesic motion completely integrable!
- Hidden symmetry

Killing spinors: Hidden symmetries

Killing Initial Data KIDs (Chrusciel & Beig 97)

- Given initial data $(\tilde{\Sigma}, \tilde{h}_{ij}, \tilde{\chi}_{ij})$ for the **vacuum <u>Einstein</u> Field Equations** (EFE) if the **Killing <u>vector</u> initial data equations** (KID) are satisfied on $\hat{\Sigma}$ then the spacetime developement admits a Killing vector ξ^a.

$\tilde{\mathcal{M}}$

Σ

Killing vector initial data

KID: Killing vector initial data

- Let $(\tilde{\mathcal{M}}, \tilde{\boldsymbol{g}})$ solution to $\tilde{R}_{ab} = 0$.

$$\tilde{S}_{ab} := \tilde{\nabla}_a \tilde{\xi}_b + \tilde{\nabla}_b \tilde{\xi}_a$$

- $\tilde{\xi}_a$ is KV iif $\tilde{S}_{ab} = 0$ (zero-quantity)
- Does $\tilde{S}_{ab} = 0$ propagate?

Identities to eqs

- Assume **vacuum EFE**
  $$\tilde{R}_{ab} = 0$$
- Assume **candidate** eqn
  $\tilde{\Box}\tilde{\xi}_a = 0$ on $(\tilde{\mathcal{M}}, \tilde{g})$
- $\implies$ Propagation equation
  $$\tilde{\Box}\tilde{S}_{ab} = 2\tilde{R}^c{}_{ab}{}^d \tilde{S}_{cd}$$
- $\tilde{S}_{ab} = 0$ & $\partial_t \tilde{S}_{ab} = 0$ on $\tilde{\Sigma}$
  $\implies \tilde{S}_{ab} = 0$ on $\mathcal{W} \subseteq \mathcal{D}^+(\tilde{\Sigma})$

Sketch of the KIDs derivation & proof

- Identity:
  $$\tilde{\nabla}^a \tilde{S}_{ab} - \frac{1}{2}\nabla_b S_a{}^a = \tilde{\Box}\tilde{\xi}_b + \tilde{R}_{cb}$$

- Definition: A **candidate** KV $\tilde{\zeta}^a$ is a vector satisfying $\tilde{\Box}\tilde{\zeta}_a = -\tilde{R}_{ab}\tilde{\zeta}^b$
- Strategy: find ID $(\zeta_a, \partial_t \zeta_a)$ on $\tilde{\Sigma}$ ensuring a **candidate** gives a **true KV**.
- Indentity:
  $$\tilde{\Box}\tilde{S}_{ab} = 2\tilde{R}^c{}_{ab}{}^d \tilde{S}_{cd} - \mathcal{L}_{\tilde{\xi}}\tilde{R}_{ab} + 2\tilde{\nabla}_{(a}\left\{\tilde{\Box}\tilde{\xi}_{b)} + \tilde{R}_{b)c}\tilde{\xi}^c\right\}$$

Killing vector initial data

KID: Killing vector initial data

- Let $(\tilde{\mathcal{M}}, \tilde{\boldsymbol{g}})$ solution to $\tilde{R}_{ab} = 0$.

$$\tilde{S}_{ab} := \tilde{\nabla}_a \tilde{\xi}_b + \tilde{\nabla}_b \tilde{\xi}_a$$

- $\tilde{\xi}_a$ is KV iif $\tilde{S}_{ab} = 0$ (zero-quantity)
- Does $\tilde{S}_{ab} = 0$ propagate?

Identities to eqs

- Assume **vacuum EFE**
  $$\tilde{R}_{ab} = 0$$
- Assume **candidate** eqn
  $$\tilde{\Box}\tilde{\xi}_a = 0 \text{ on } (\tilde{\mathcal{M}}, \tilde{g})$$
- $\implies$ Propagation equation
  $$\tilde{\Box}\tilde{S}_{ab} = 2\tilde{R}^c{}_{ab}{}^d \tilde{S}_{cd}$$
- $\tilde{S}_{ab} = 0$ & $\partial_t \tilde{S}_{ab} = 0$ on $\tilde{\Sigma}$
  $\implies \tilde{S}_{ab} = 0$ on $\mathcal{W} \subseteq \mathcal{D}^+(\tilde{\Sigma})$

Sketch of the KIDs derivation & proof

- Identity:

CKSID Conformal Killing Spinor ID (G. & Williams 22)

Killing spinors and conformal transformations

- KS are conf. inv. $\tilde{\nabla}_{A'(A}\tilde{\kappa}_{BC)} = 0 \implies$
  $\nabla_{A'(A}\kappa_{BC)} = 0$ with $\kappa_{AB} = \Omega^2 \tilde{\kappa}_{AB}$.
- But proof in $(\tilde{\mathcal{M}}, \tilde{g})$ doesn't apply to $(\mathcal{M}, g)$!
- The EFE are **not** conf. inv.
- $\xi_a \mapsto \xi_{AA'} := \nabla^B{}_{A'}\kappa_{AB}$ is **not** a (C)KV.

Zero-quantities?

$H_{A'ABC} := 3\nabla_{A'(A}\kappa_{BC)}$

$S_{AA'BB'} := \nabla^Q{}_{A'}H_{B'QAB}$

$\quad = \nabla_{AA'}\xi_{BB'} + \nabla_{BB'}\xi_{AA'} + 6\kappa_{(A}{}^Q\Phi_{B)QA'B'}$

- Φ satisfies diff conditions in $(\mathcal{M}, g)$.
- S not geom motivated.
- Relate Φ to $\tilde{\Phi}$? ⤳ Singular eqs Ω^{-1}-terms
- Fuchsyan systems theory vs CEFE philosophy

Buchdahl

$H = 0 \implies (\mathcal{M}, g)$
Algebraically Special

$\nabla_{(A}{}^{A'}H_{|A'|BCD)}$
$\quad = 6\kappa_{(A}{}^Q\Psi_{BCD)Q} = 0$

Petrov Type D, N, O.
$\Psi_{ABCD} = \Psi\kappa_{(AB}\kappa_{CD)}$

Buchdahl zero-quantity

$\phi_{ABCD} = \Omega^{-1}\Psi_{ABCD}$

Def Buchdahl 0-quant
$B_{ABCD} := \kappa_{(A}{}^Q\phi_{BCD)Q}$

$\nabla \times H = 6\Omega B$

CKSID Conformal Killing Spinor ID (G. & Williams 22)

Killing spinors and conformal transformations

- KS are conf. inv. $\tilde{\nabla}_{A'(A}\tilde{\kappa}_{BC)} = 0 \implies$
  $\nabla_{A'(A}\kappa_{BC)} = 0$ with $\kappa_{AB} = \Omega^2 \tilde{\kappa}_{AB}$.
- But proof in $(\tilde{\mathcal{M}}, \tilde{\boldsymbol{g}})$ doesn't apply to $(\mathcal{M}, \boldsymbol{g})$!
- The EFE are **not** conf. inv.
- $\xi_a \mapsto \xi_{AA'} := \nabla^B{}_{A'}\kappa_{AB}$ is **not** a (C)KV.

Zero-quantities?

$H_{A'ABC} := 3\nabla_{A'(A}\kappa_{BC)}$

$S_{AA'BB'} := \nabla^Q{}_{A'}H_{B'QAB}$
$\quad = \nabla_{AA'}\xi_{BB'} + \nabla_{BB'}\xi_{AA'} + 6\kappa_{(A}{}^Q \Phi_{B)QA'B'}$

- $\boldsymbol{\Phi}$ satisfies diff conditions in $(\mathcal{M}, \boldsymbol{g})$.
- $\boldsymbol{S}$ not geom motivated.
- Relate $\boldsymbol{\Phi}$ to $\tilde{\boldsymbol{\Phi}}$? $\rightsquigarrow$ Singular eqs Ω^{-1}-terms
- Fuchsyan systems theory vs CEFE philosophy

Buchdahl

$\boldsymbol{H} = 0 \implies (\mathcal{M}, \boldsymbol{g})$
Algebraically Special

$\nabla_{(A}{}^{A'}H_{|A'|BCD)}$
$\quad = 6\kappa_{(A}{}^Q \Psi_{BCD)Q} = 0$

Petrov Type D, N, O.
$\Psi_{ABCD} = \Psi\kappa_{(AB}\kappa_{CD)}$

Buchdahl zero-quantity

$\phi_{ABCD} = \Omega^{-1}\Psi_{ABCD}$

Def Buchdahl 0-quant
$B_{ABCD} := \kappa_{(A}{}^Q \phi_{BCD)Q}$

$\nabla \times \boldsymbol{H} = 6\Omega\boldsymbol{B}$

Conformal ("Unphysical") Killing Spinor ID

Unphysical zero-quantities

$$H_{A'ABC} := 3\nabla_{A'(A}\kappa_{BC)},$$

$$B_{ABCD} := \kappa_{(A}{}^{Q}\phi_{BCD)Q}.$$

$$F_{A'BCD} := \nabla^{Q}{}_{A'}B_{QBCD}.$$

KSID (G. & Williams 22)

- Candidate KS eq for κ.

- Assume vacuum CEFE are satisfied.

- Closed system of homogeneous wave eqs

$$\Box H = \mathcal{G}_1(H, B)$$
$$\Box B = \mathcal{G}_2(H, B, F)$$
$$\Box F = \mathcal{G}_3(H, B, F)$$

- Trivial ID on Σ $\implies$
  $H = B = F = 0$ on $\mathcal{W} \subseteq \mathcal{D}^{+}(\Sigma)$

- $(\kappa, \partial_t \kappa)$ on Σ.

KS Candidate equation:

$$\Box\kappa_{AB} = -\tfrac{1}{6}R\,\kappa_{AB} + \Omega\phi_{ABCD}\kappa^{CD}$$

Initial data on Σ:

$$\kappa_{AB} = \mathring{\kappa}_{AB}$$
$$\nabla_\tau \kappa_{AB} = \mathcal{D}_{Q(A}\mathring{\kappa}_{B)}{}^{Q}$$

CKSID conds on Σ

$$\mathcal{D}_{(AB}\mathring{\kappa}_{CD)} = 0, \quad \mathring{\kappa}_{(A}{}^{Q}\phi_{BCD)Q} = 0$$

$\mathcal{D}_{AB}$ is a Sen der intrinsic to (h, Σ)

Conformal ("Unphysical") Killing Spinor ID

Unphysical zero-quantities

$$H_{A'ABC} := 3\nabla_{A'(A}\kappa_{BC)},$$

$$B_{ABCD} := \kappa_{(A}{}^Q\phi_{BCD)Q}.$$

$$F_{A'BCD} := \nabla^Q{}_{A'}B_{QBCD}.$$

KSID (G. & Williams 22)

- Candidate KS eq for $\boldsymbol{\kappa}$.
- Assume vacuum CEFE are satisfied.
- Closed system of homogeneous wave eqs

$$\Box\boldsymbol{H} = \mathcal{G}_1(\boldsymbol{H}, \boldsymbol{B})$$

$$\Box\boldsymbol{B} = \mathcal{G}_2(\boldsymbol{H}, \boldsymbol{B}, \boldsymbol{F})$$

$$\Box\boldsymbol{F} = \mathcal{G}_3(\boldsymbol{H}, \boldsymbol{B}, \boldsymbol{F})$$

- Trivial ID on $\Sigma \implies$
  $\boldsymbol{H} = \boldsymbol{B} = \boldsymbol{F} = 0$ on $\mathcal{W} \subseteq \mathcal{D}^+(\Sigma)$
- $(\boldsymbol{\kappa}, \partial_t\boldsymbol{\kappa})$ on Σ.

KS Candidate equation:

$$\Box\kappa_{AB} = -\tfrac{1}{6}R\,\kappa_{AB} + \Omega\phi_{ABCD}\kappa^{CD}$$

Initial data on Σ:

$$\kappa_{AB} = \mathring{\kappa}_{AB}$$
$$\nabla_\tau\kappa_{AB} = \mathcal{D}_{Q(A}\mathring{\kappa}_{B)}{}^Q$$

CKSID conds on Σ

$$\mathcal{D}_{(AB}\mathring{\kappa}_{CD)} = 0, \quad \mathring{\kappa}_{(A}{}^Q\phi_{BCD)Q} = 0$$

$\mathcal{D}_{AB}$ is a Sen der intrinsic to $(\boldsymbol{h}, \Sigma)$

Conformal ("Unphysical") Killing Spinor ID

Unphysical zero-quantities

$$H_{A'ABC} := 3\nabla_{A'(A}\kappa_{BC)},$$

$$B_{ABCD} := \kappa_{(A}{}^Q \phi_{BCD)Q}.$$

$$F_{A'BCD} := \nabla^Q{}_{A'} B_{QBCD}.$$

KSID (G. & Williams 22)

- Candidate KS eq for $\boldsymbol{\kappa}$.
- Assume vacuum CEFE are satisfied.
- Closed system of homogeneous wave eqs

$$\Box \boldsymbol{H} = \mathcal{G}_1(\boldsymbol{H}, \boldsymbol{B})$$

$$\Box \boldsymbol{B} = \mathcal{G}_2(\boldsymbol{H}, \boldsymbol{B}, \boldsymbol{F})$$

$$\Box \boldsymbol{F} = \mathcal{G}_3(\boldsymbol{H}, \boldsymbol{B}, \boldsymbol{F})$$

- Trivial ID on $\Sigma \implies$
  $\boldsymbol{H} = \boldsymbol{B} = \boldsymbol{F} = 0$ on $\mathcal{W} \subseteq \mathcal{D}^+(\Sigma)$
- $(\boldsymbol{\kappa}, \partial_t \boldsymbol{\kappa})$ on Σ.

KS Candidate equation:

$$\Box \kappa_{AB} = -\tfrac{1}{6} R\, \kappa_{AB} + \Omega \phi_{ABCD} \kappa^{CD}$$

Initial data on Σ:

$$\kappa_{AB} = \mathring{\kappa}_{AB}$$
$$\nabla_{\boldsymbol{\tau}} \kappa_{AB} = \mathcal{D}_{Q(A}\mathring{\kappa}_{B)}{}^Q$$

CKSID conds on Σ

$$\mathcal{D}_{(AB}\mathring{\kappa}_{CD)} = 0, \quad \mathring{\kappa}_{(A}{}^Q \phi_{BCD)Q} = 0$$

$\mathcal{D}_{AB}$ is a Sen der intrinsic to $(\boldsymbol{h}, \Sigma)$
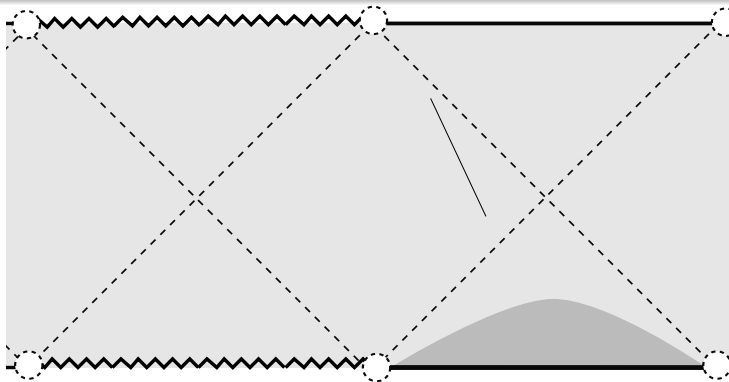

- Given **ID for the vacuum CEFE**, if the CKSID conditions

$$\mathcal{D}_{(AB}\kappa_{CD)} = 0, \qquad \kappa_{(A}{}^{Q}\phi_{BCD)Q} = 0$$

  are satisfied on Σ, then there exists a Killing spinor in $\mathcal{W} \subseteq \mathcal{D}^{+}(\Sigma)$.

- In the asymptotic IVP set-up $\Sigma = \mathscr{I}$

Weyl collineation

- If $(\mathcal{M}, \boldsymbol{g})$ is a conformally Einstein manifold
- $\xi_a \mapsto \xi_{AA'} := \nabla^B{}_{A'}\kappa_{AB}$ is a **curvature collineation** of the rescaled Weyl spinor:
- $$\mathcal{L}_{\boldsymbol{\xi}}\phi = 0$$

Associated conformal Killing vector

$$X_{AA'} = \Omega\xi_{AA'} - 3\kappa_{AQ}\nabla_{A'}{}^Q\Omega$$

- X_a is a conformal KV of $(\mathcal{M}, \boldsymbol{g})$
- $\tilde{X}_a = \Omega^2 X_a$ is a KV of $(\tilde{\mathcal{M}}, \tilde{\boldsymbol{g}})$

Weyl collineation

- If $(\mathcal{M}, \boldsymbol{g})$ is a conformally Einstein manifold
- $\xi_a \mapsto \xi_{AA'} := \nabla^B{}_{A'} \kappa_{AB}$ is a **curvature collineation** of the rescaled Weyl spinor:
- $$\mathcal{L}_{\boldsymbol{\xi}} \phi = 0$$

Associated conformal Killing vector

$$X_{AA'} = \Omega \xi_{AA'} - 3\kappa_{AQ} \nabla_{A'}{}^{Q} \Omega$$

- X_a is a conformal KV of $(\mathcal{M}, \boldsymbol{g})$
- $\tilde{X}_a = \Omega^2 X_a$ is a KV of $(\tilde{\mathcal{M}}, \tilde{\boldsymbol{g}})$

Future applications

- Characterisation Kerr-de-Sitter through asympt ID.
- Type D initial data characterisation.

Future directions

- Conds on a spacelike $\mathscr{I}$ for simplicity
- Other existence and uniqueness thms for wave eqs $\rightsquigarrow$
    - Characteristic IVP
    - IBVP
- $\rightsquigarrow$ Data on null or timelike $\mathscr{I}$

Many thanks for your attention
